Indoor unit is an appliance not accessible to the general public.

**A** CAUTION R410A REFRIGERANT

IIS PRODUCT MUST ONLY BE INSTALLED OR SERVICED gulations, codes, installation & operation manuals, before installation, maintenance and /or service of this product.

(PART NO. 9374318285-02)

For authorized service personnel only.

		•
	<b>⚠</b> DANGER	This mark indicates procedures which, if improperly performed, are most likely to result in the death of or serious injury to the user or service personnel.
I WARNING I		This mark indicates procedures which, if improperly performed, might lead to the death or serious injury of the user.
	<b>⚠</b> CAUTION	This mark indicates procedures which, if improperly performed, might possibly result in personal harm to the user, or damage to property.

#### **⚠** DANGER

Never touch electrical components immediately after the power supply has been turned off. Electrical shock may occur. After turning off the power, always wait 5 minutes or more before touching electrical components.

#### This air conditioner uses new refrigerant HFC (R410A). The basic installation work procedures are the same as conventional refrigerant models.

However, pay careful attention to the following points:

- Since the working pressure is 1.6 times higher than that of conventional refrigerant models, some of the piping and installation and service tools are special. (See the table below.) Especially, when replacing a conventional refrigerant model with a new refrigerant R410A model, always replace the conventional piping and flare nuts with the R410A piping and flare nuts.
- Models that use refrigerant R410A have a different charging port thread diameter to prevent erroneous charging with conventional refrigerant and for safety. Therefore, check beforehand. [The charging port thread diameter for R410A is 1/2 UNF 20 threads per inch.]
- 3 Be more careful that foreign matter (oil, water, etc.) does not enter the piping than with refrigerant models. Also, when storing the piping, securely seal the openings by pinching, taping, etc. 4) When charging the refrigerant, take into account the slight change in the composition of the gas and liquid
- phases, and always charge from the liquid phase side whose composition is stable.

## Special tools for R410A

Tool name	Contents of change	
Gauge manifold	Pressure is high and cannot be measured with a conventional gauge. To prevent erroneous mixing of other refrigerants, the diameter of each port has been changed.  It is recommended the gauge with seals –0.1 to 5.3 MPa (–76 cmHg to 53 kgf/cm²) for high pressure.  –0.1 to 3.8 MPa (–76 cmHg to 38 kgf/cm²) for low pressure.	
Charge hose	To increase pressure resistance, the hose material and base size were changed.	
Vacuum pump	A conventional vacuum pump can be used by installing a vacuum pump adapter.	
Gas leakage detector Special gas leakage detector for HFC refrigerant R410A.		

It is necessary to use seamless copper pipes and it is desirable that the amount of residual oil is less than 40 mg/10m. Do not use copper pipes having a collapsed, deformed or discolored portion (especially on the interior surface). Otherwise, the expansion valve or capillary tube may become

blocked with contaminants. As an air conditioner using R410A incurs pressure higher than when using conventional refrigerant, it is necessary to choose adequate materials. Thicknesses of copper pipes used with R410A are as shown in the table. Never use copper pipes thinner than that in the table even when it is available on the market

The following installation parts are furnished. Use them as required.

Application

joint (gas)

#### **↑** WARNING

- For the air conditioner to operate satisfactorily, install it as outlined in this installation instruction sheet. Connect the indoor unit and outdoor unit with the air conditioner piping and cables available standards parts. This installation instruction sheet describes the correct connections using the installation set available from our standard parts.
- Installation work must be performed in accordance with national wiring standards by authorized personnel
- ④ If refrigerant leaks while work is being carried out, ventilate the area. If the refrigerant comes in contact with a flame, it produces a toxic gas.
- Do not use an extension cable

6) Do not turn on the power until all installation work is complete.

#### **↑** CAUTION

This installation instruction sheet describes how to install the indoor unit only. To install the outdoor unit, refer to the installation instruction sheet included with the outdoor unit.

- · Be careful not to scratch the air conditioner when handling it.
- · After installation, explain correct operation to the customer, using the operating manual. Let the customer keep this installation instruction sheet because it is used when the air conditioner is serviced

### **SELECTING THE MOUNTING POSITION**

#### **⚠** WARNING

Install at a place that can withstand the weight of the indoor and outdoor units and install positively so that the units will not topple or fall.

#### **A** CAUTION

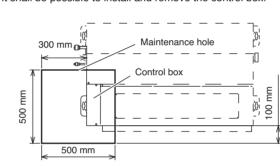

- Do not install where there is the danger of combustible gas leakage.
- Do not install the unit near heat source of heat, steam, or flammable gas.
- g) If children under 10 years old may approach the unit, take preventive measures so that they cannot reach
- (4) Take precautions to prevent the unit from falling
- Decide the mounting position with the customer as follows:

#### **INDOOR UNIT**

- (1) Install the indoor unit on a place having a sufficient strength so that it withstand against the weight of the indoor unit.
- (2) The inlet and outlet ports should not be obstructed; the air should be able to blow all over the room
- (3) Leave the space required to service the air conditioner.
- (4) Install the unit where the drain pipe can be easily installed.
- (5) Providing as much space as possible between the indoor unit and the ceiling will make
- (6) If installing in a place where its humidity exceeds 80%, use heat insulation to prevent condensation.

# 2500 mm or more (When no ceiling)

#### Maintenance hole dimension It shall be possible to install and remove the control box.

It shall be possible to install and remove the control box, fan Maintenance hole

# CONNECTING PIPE REQUIREMENT

#### **↑** CAUTION

Refer to the installation instruction sheet of the outdoor unit for description of the length of connecting pipe or for difference of its elevation.

MODEL		24000 BTU/h model	30000/36000/45000 BTU/h model
Diameter	Liquid	6.35 mm (1/4 in.)	9.52 mm (3/8 in.)
Diameter	Gas	15.88 mm (5/8 in.)	15.88 mm (5/8 in.)

## Use pipe with water-resistant heat insulation.

### **↑** CAUTION

Install heat insulation around both the gas and liquid pipes. Failure to do so may cause water leaks. Use heat insulation with heat resistance above 120 °C. (Reverse cycle model only) In addition, if the humidity level at the installation location of the refrigerant piping is expected to exceed 70%, install heat insulation around the refrigerant piping. If the expected humidity level is 70-80%, use heat insula-

tion that is 15 mm or thicker and if the expected humidity exceeds 80%, use heat insulation that is 20 mm or If heat insulation is used that is not as thick as specified, condensation may form on the surface of the insula-

## tion. In addition, use heat insulation with heat conductivity of 0.045 W/(m·K) or less (at 20 °C).

Co	Connection cable (mm²)		
М	AX.	MIN.	
2	2.5	1.5	

Use conformed cable with Type 245 IEC57

**ELECTRICAL REQUIREMENT** 

- · Install the disconnect device with a contact gap of at least 3 mm nearby the units. (Both indoor unit and outdoor unit)
- · Install all electrical works in accordance to the standard.

## INSTALLATION **PROCEDURE**

## **INDOOR UNIT INSTALLATION**

## **↑** WARNING

Install the air conditioner in a location which can withstand a load of at least five times the weight of the main unit and which will not amplify sound or If the installation location is not strong enough, the

indoor unit may fall and cause injuries.

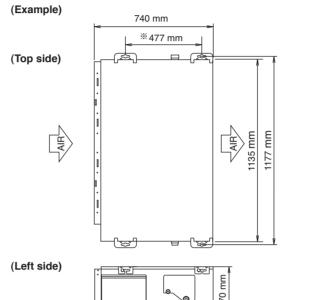

**↑** CAUTION

For installation, refer to the technical data.

1. INSTALLING THE HANGERS

**↑** WARNING When fastening the hangers, make the bolt positions uniform.

Hanging bolt installation diagram.

The distance of X is adjustable according to the place of the hanging bolts. (MAX: 550 mm, MIN: 410 mm)

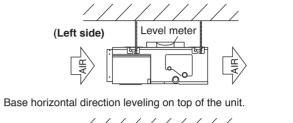

## Hanging bolt M10 (Obtained locally) Washer (Obtained locally)

Slide the unit in the arrow direction and fasten it.

#### **Bolt Strength** 9.81 to 14.71 N·m (100 to 150 kgf·cm)

**↑** WARNING Fasten the unit securely with special nuts A and B.

2. LEVELING Base vertical direction leveling on the unit (right and left).

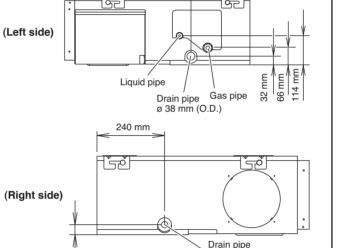

### 3. INSTALLING DRAIN HOSE

The tilt should be in the range of 0 mm to 5 mm.

Install the drain hose according to the measurements given in the following figure.

Give a slight tilt to the side to which the drain hose is connected

ø 38 mm (O.D.)

The drain cap is attached

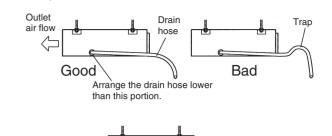

at the factory setting.

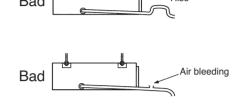

Install the drain hose in accordance with the instructions in this installation instruction sheet and keep the area warm enough to prevent condensation. Problems with the piping may lead to water leaks.

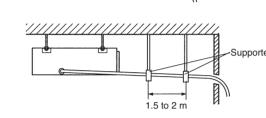

**↑** CAUTION

#### NOTE: INSTALL THE DRAIN HOSE

- · Install the drain hose with downward gradient (1/50 to 1/100) and so there are no rises or traps in the hose. · Use general hard polyvinyl chloride pipe (VP25) [outside diameter 38 mm] and connect it with adhesive (polyvinyl
- chloride) so that there is no leakage. · When the hose is long, install supporters.
- Do not perform air bleeding Always heat insulate the indoor side of the drain hose.

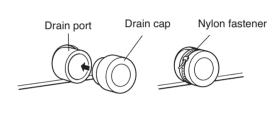

· When the unit is shipped from the factory, the drain port is on the left side (control box side).

· When using the drain port on the right side of the unit, reinstall the drain cap to the left side drain port.

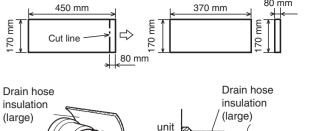

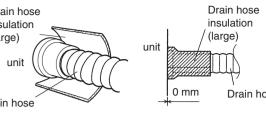

unused drain port and is fastened with the nylon

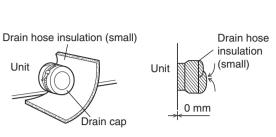

fastened by the nylon fastener, water may drip dur-

## · Cut the drain hose insulation at a position approximately 80 mm from the end with cutters, etc. Stick the large drain hose insulation at the drain hose installation

· Stick the small drain hose insulation at the drain cap side.

· Cover the drain cap with the drain hose insulation.

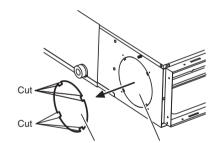

## **↑** CAUTION

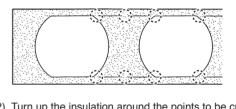

Always check that the drain cap is installed to the

If the drain cap is not installed, or is not sufficiently ing the cooling operation.

#### 6. FRESH AIR INTAKE (Processing before use)

(1) When taking in fresh air, cut a slit shaped cabinet in the left side of the outer case with nippers.

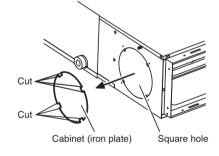

to the outlet port shape working points so that the insulation does not stick out at the /////// part.

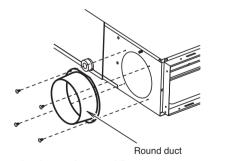

(4) Since there is a slit in the insulation, use radio pliers, tweezers

etc. to stretch the screw hole part used when installing the round flange and square flange when connecting the duct.

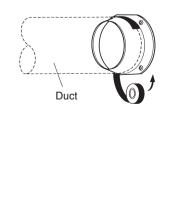

# ful not to damage the indoor unit internal parts

2 When processing the cabinet (iron plate), be careful not to injure yourself with burrs, etc.

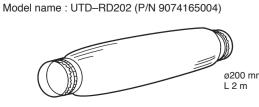

(4) Seal with a band and vinyl tape, etc. so that air does not leak from the connection

## Follow the procedure in the following figure to the ducts. 1015 mm

4. INTAKE DUCT CONNECTION

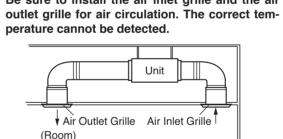

**↑** CAUTION When air is taken in from the bottom side, the operating sound of the product will easily enter the room. Install the product and intake grilles where the affect of the operating sound is small.

## **↑** CAUTION 1) If an intake duct is installed, take care not to damage the temperature sensor. Be sure to install the air inlet grille and the air

3 Grills must be fixed so that man cannot touch indoor unit fan, and cannot be removed by only hand operation without tool.

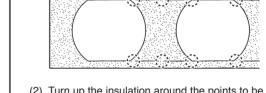

4 Be sure to install the air filter in the air inlet. If the air filter is not installed, the heat exchanger may be clogged and its performance may decrease.

(2) Round duct outlet ×4 (This is the factory setting.) When using as a square duct

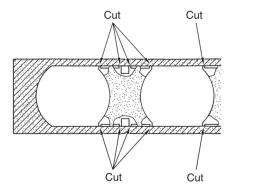

5. OUTLET DUCT CONNECTION

Duct installation pattern ( CUT PART)

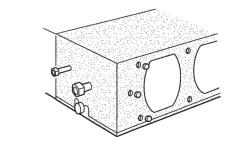

(1) Square duct

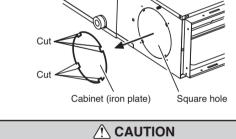

(2) Turn up the insulation around the points to be cut according

(3) Connect the duct to the round flange.

(Continued to the next page.)

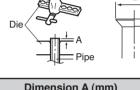

would reduce the lifetime of the units. While welding the pipes, be sure to blow dry nitrogen gas through them.

mineral oil from getting into the system as this

- The maximum lengths of this product are shown in the table. If the units are further apart than this, correct operation cannot be guaranteed.
- . FLARING
- 1) Cut the connection pipe to the necessary length with a pipe
- 2) Hold the pipe downward so that cuttings will not enter the pipe and remove the burrs
- 3) Insert the flare nut (always use the flare nut attached to the indoor and outdoor units respectively) onto the pipe and perform the flare processing with a flare tool. Use the special R410A flare tool, or the conventional flare

Check if [L] is flared uniformly and is not cracked or scratche

Pipe outside diameter	Dimension A (mm)	
ripe outside diameter	Flare tool for R410A, clutch typ	
6.35 mm (1/4 in.)

	15.88 mm (5/8 in.)	29 mm
	19.05 mm (3/4 in.)	36 mm

#### 2. BENDING PIPES

The pipes are shaped by your hands. Be careful not to collapse

Do not bend the pipes in an angle more than 90°. When pipes are repeatedly bent or stretched, the material will harden, making it difficult to bend or stretch them any more. Do not bend or stretch the pipes more than three times.

#### **↑** CAUTION

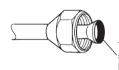

- 1) To prevent breaking of the pipe, avoid sharp Bend the pipe with a radius of curvature of 150
- If the pipe is bent repeatedly at the same place, it will break.
- 3. CONNECTION PIPES

Indoor unit

(1) Detach the caps and plugs from the pipes.

## **CAUTION**

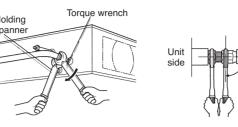

- Be sure to apply the pipe against the port on the indoor unit correctly. If the centering is improper, the flare nut cannot be tightened smoothly. If the flare nut is forced to turn, the threads will be damaged.
- Do not remove the flare nut from the indoor unit pipe until immediately before connecting the connection pipe.
- (2) Centering the pipe against port on the indoor unit, turn the flare nut with your hand.

surface with alkylbenzene oil (HAB). Do not use mineral oil.

#### **↑** CAUTION Hold the torque wrench at its grip, keeping it in the right angle with the pipe, in order to tighten the

When the flare nut is tightened properly by your hand, use a torque wrench to finally tighten it.

flare nut correctly.

#### **↑** CAUTION Be sure to connect the gas pipe after connecting

## the liquid pipe completely. 4. HEAT INSULATION ON THE PIPE JOINTS

(INDOOR SIDE ONLY) After checking for gas leaks, insulate by wrapping insulation around the two parts (gas and liquid) of the indoor unit coupling,

using the coupler heat insulation. After installing the coupler heat insulation, wrap both ends with vinyl tape so that there is no gap.

Must fit tightly against	body without any gap.

**↑** CAUTION

## **ELECTRICAL WIRING**

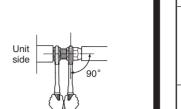

**↑** WARNING

Match the terminal board numbers and con-

nection cable colors with those of the outdoor

Erroneous wiring may cause burning of the

Before starting work, check that power is not being supplied to the indoor unit and outdoor

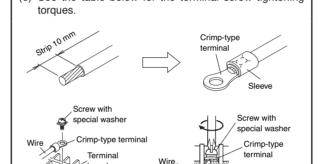

electric parts. Connect the connection cables firmly to the terminal board. Imperfect installation may cause a fire.

- Always fasten the outside covering of the connection cable with the cable clamp, (If the insulator is chafed, electric leakage may
- Always connect the ground wire.
- Install the remote controller wires so as not to be direct touched with your hand.

#### **HOW TO CONNECT WIRING TO THE** TERMINALS

#### For strand wiring Use crimp-type terminals with insulating sleeves as shown

- in the figure below to connect to the terminal block. 2) Securely crimp the crimp-type terminals to the wires using
- an appropriate tool so that the wires do not come loose. 3) Use the specified wires, connect them securely, and fasten
- them so that there is no stress placed on the terminals. 4) Use an appropriate screwdriver to tighten the terminal
- Do not use a screwdriver that is too small, otherwise, the screw heads may be damaged and prevent the screws from being properly tightened.
- ) Do not tighten the terminal screws too much, otherwise, the screws may break See the table below for the terminal screw tightening

	Tightening torque
M4 screw	1.2 to 1.8 N·m (12 to 18 kgf·c

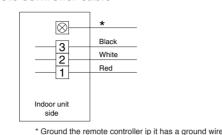

#### Use crimp-type terminals and tighten the terminal screws to the specified torques, otherwise, abnormal overheating may be produced and possibly cause heavy damage inside the unit.

## STATIC PRESSURE **CHARACTERISTIC**

#### If the applicable static pressure does not match the static pressure mode, the static pressure mode may

be changed to another mode automatically.

**EXTERNAL STATIC PRESSURE** 30Pa to 150Pa

### of static pressure Determine the applicable range of static pressure in each mode

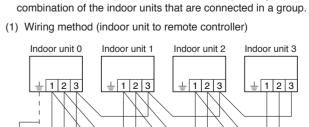

your bare hands.

2. MODE SETTING

# **SPECIAL INSTALLATION**

**⚠** CAUTION When setting DIP switches, do not touch any other parts on the circuit board directly with

• A number of indoor units can be operated at the same time using a single remote controller

1 2 3

(2) DIP switch setting (Indoor unit) Set the unit number of each indoor unit using DIP switch on the ndoor unit circuit board. (See following table and figure.) DIP switch is normally set to make unit number No. 0.

controller cable

# **A** CAUTION

# **RECOMMENDED RANGE OF**

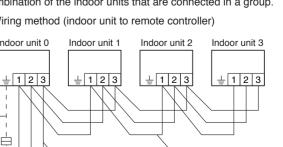

1. STATIC PRESSURE MODE It is necessary to set up a static pressure mode for each usage

and wind volume, referring to the TECHNICAL MANUAL.

#### It is possible to change the setting of static pressure mode. Refer to [5] FUNCTION SETTING.

# **METHODS**

1. GROUP CONTROL SYSTEM

When ground wire is necessary

Indoor unit

Example: No. 3

following table

operating manual:

2. DUAL REMOTE CONTROLLERS Two separate remote controllers can be used to operate the

Remote controller cable When ground wire unit

Set the remote controller DIP switch 1 No. 2 according to the

Master unit Slave unit Number of remote controllers DIP SW 1 No. 2 DIP SW 1 No. 2 OFF 2 (Dual) ON

Explain the following to the customer in accordance with the

9374318285-02.indd 2

· The timer and self-diagnosis functions cannot be used on the (1) Wiring method (indoor unit to remote controller)

Remote controlle (2) Remote controller DIP switch 1 setting

**CUSTOMER GUIDANCE** 

(1) Starting and stopping method, operation switching, temperature adjustment, timer, air flow switching, and other remote controller operations. (2) Air filter removal and cleaning. (3) Give the operating and installation manuals to the customer.
